

Gaurinath Subash

gpsubash@ncsu.edu | linkedin.com/in/gaurinathsubash | Github.com/GauripSubash | Apex, NC

EDUCATION

North Carolina State University
B.S. in Computer Science, GPA: 3.6

Expected Graduation: May 2028
Raleigh, NC

TECHNICAL SKILLS

Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering, Web Development

Programming Languages: Java, C#, C, C++, TypeScript, Razor, HTML, JavaScript, Python, R

Frameworks & Databases: .NET, AngularJS, React (Next.js), RabbitMQ, Databricks, PostgreSQL, Spring Boot

Developer Tools: GitLab, Docker, Jira, New Relic, VS Code, Visual Studio, Eclipse

WORK EXPERIENCE

IT Student Technician

Aug. 2025 – Present

North Carolina State University

Raleigh, NC

- Diagnose multi-layered hardware and software failures across 50+ classrooms, maintaining 99% uptime.
- Execute rapid incident analysis on 15–25 complex technical issues weekly to eliminate system downtime.
- Deliver cross-functional technical support to 100+ faculty and staff members, ensuring timely communication and resolution tracking.

Software Engineering Intern

May 2026 – Aug. 2026

Direct Supply

Durham, NC

- Engineered 10+ event-driven microservices using C# and RabbitMQ to automate customer notifications.
- Designed and implemented 5+ front-end UI features using AngularJS and ASP.NET Razor to extend functionality for external service providers.
- Spearheaded an Agile team of engineers to ship 20-25 production releases biweekly using PostgreSQL/SQL Server databases and GitLab CI/CD pipelines.

Data Science Intern

Jul. 2023 – Jan. 2024

David Kane's Data Lab

Remote

- Created 75+ open-source data science tutorials utilizing US Census Data and R, enhancing statistical analysis comprehension for 500+ student learners.
- Engineered 40+ interactive visualizations and hands-on exercises enabling learners to extract real-world insights from complex datasets.
- Extracted and processed 10+ GB of raw census datasets using complex SQL queries, aggregations, and R data-cleaning workflows, improving data accuracy by 25%.

PROJECTS

Ramp | Team Project

Aug. 2026

- Co-developed an automated developer onboarding platform that parses Git repositories to generate 20+ technical assessments per repository run.
- Designed a responsive web portal using React 19, Typscript, and Tailwind CSS that executes test runs and reverse-diff inspections in under 15ms.
- Coded browser Web Audio APIs to Express REST endpoints and cloud Speech-to-Text services to grade spoken code explanations against structured rubrics under 1.5s latency.

Story Point Estimator | Python | Team Project

May 2025 – Jun. 2025

- Created a data-intensive Python processing pipeline to parse 500,000+ unstructured records, automating story-point estimation to streamline developer planning workflows.
- Developed object-oriented Python modules utilizing Logistic Regression and Naive Bayes text-mining algorithms to extract features from 2,000+ software issue tracking logs.
- Collaborated with a graduate mentor and 2 peer researchers to validate predictive performance and refine production-ready code.
